

## RISK ADVISORY

Unwanted influence on your business activities through internal-external influence or a burglary, from extortion to arson and from activism to terrorism. Many organizations struggle with a good and effective Security and Safety policy. It is difficult to keep such threats manageable and it is often unclear how strong or weak the organization is when it comes to Security and Safety issues. Solid Systems - Risk Advisory helps those organizations by bringing relevant risks under control in a predetermined risk acceptable, controlled and manageable manner.

Security Management according to “De Haagse Methodiek” (DHM) is a well-known concept within the Dutch Security branch. This methodology has been devised for a manageable Security structure within companies and institutions; from policy-making to implementation, including quality assurance and auditing.

### Limit your Risks

The extent to which a series of threats must actually be seen as a realistic Risk depends on a careful assessment of the credibility of the threat, the specific vulnerabilities of the organization, the environment and the extent to which an unexpected incident can affect the organization. By having the Security Management package tested in the final sense, you have a certified package of Security measures at your disposal, with which an organization can demonstrate towards third parties that it has done everything possible to make all Risks and threats visible, controlled and manageable.

Reliable Security Management therefore requires customization. After all, a logistics company within a seaport area or a department store in the city centre is exposed to completely different Risks than High Risk and Critical environments, such as museums or banking institutions.

### Avoid third-party liability

The DHM method offers all actors involved in Security the possibility of helps identify Security problems from the same approach and, if necessary, solving them corporate together.

#### Benefits of DHM Security Management:

- Flexible method;
- Systematic approach;
- Organized;
- Transparency;
- Accountability;
- Quality assurance;
- Standardization;
- Cost reduction.

#### Components of DHM Security Management:

- Interne Security Audit: ISA - organization chart;
- Security Policy Plan: SBP - organization chart;
- Basic Security Plan: BSP - organization chart;
- Monitoring plan: BWP - organization chart;
- Internal Security Organization Plan: plan IBO;
- Determine Incident manageability: Ib;
- External Security Organization Plan: plan EBO;
- Periodic Inspection Program: PIP;
- Company Security Manager: BSM - organization chart;
- Security Management Package: SMP - organization chart.

The business unit can offer elements such as a RISA, Security Quick Scan (SQS) and ISA-ISPS-TAPA-BORG audits, Risk assessments and vulnerable Risk management tools.
